

The 12th Dirac(X) Users' Workshop

Welcome and House Rules

Federico Stagni

federico.stagni@cern.ch 

DiracGrid Technical Coordinator

13–16 October 2026, FZU Prague

 indico.cern.ch/event/1588323

Welcome to the 12th DIRAC Users' Workshop

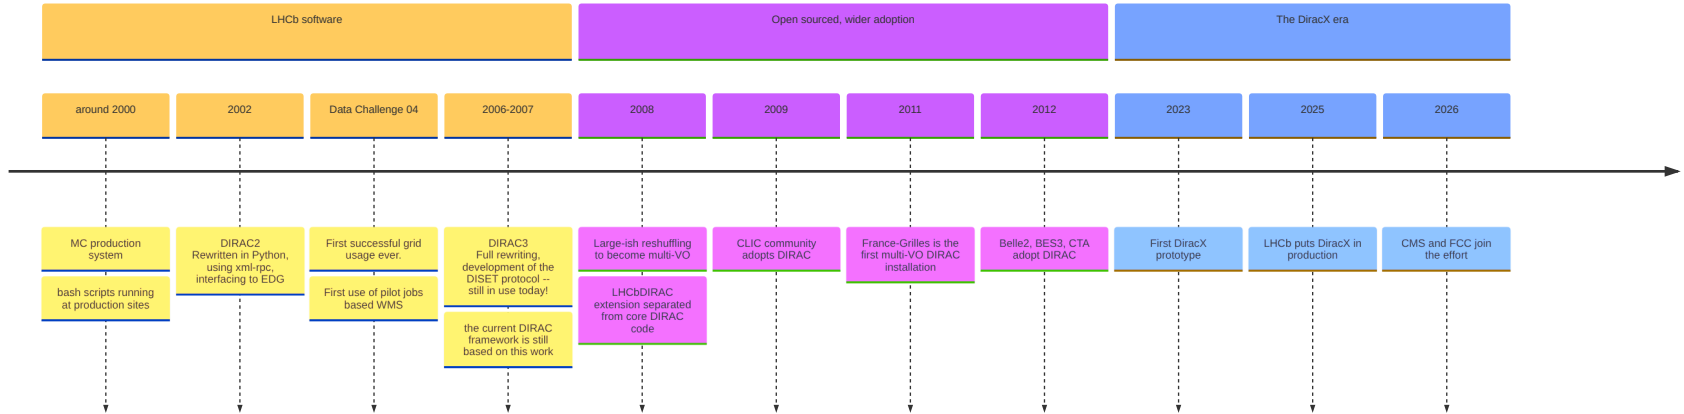

- ... plus **2 "virtual" ones** that were held in COVID times.
- Great to see so many familiar faces here in Prague
 - and, equally, new ones.

Workshop Rules

- The agenda has a **clear divide**: we *present in the mornings*, and we *discuss/hack in the afternoons* (in smaller groups)
- In general, there is **always** time for questions, but if they can be asked in the afternoons, **do ask them in the afternoons**
 - we often reserve topic sessions in the afternoons as continuation of the what is presented in the mornings
- We are here to **learn** from each other and **get things done**

The shortened Dirac's story

Timeline:

(full history in this presentation)

Nowadays, the DiracGrid project develops/maintains DIRAC, DiracX, Web, etc... (everything in <https://github.com/DIRACGrid>).

diracgrid.org is hosting "everything" else you need.

2026 is a pivotal year

- **CMS and FCC are joining the effort** – bringing new requirements, scale, and energy to the project
- **New development process adopted** since the beginning of 2026
 - SCRUM-based, with 2-week sprints and regular checkpoint meetings
- **ADRs for everything** – Architecture Design Records guide every major decision before code is written
 - Transparent, reviewable, community-driven design process
 - DX-ADR series covers Transformation System, compute backends, CWL, and more

Communication

- We believe that proper communication is **paramount** to the success of the project
- We organize **4 in-person meetings per year**:
 - A 4-days workshop (somewhere, but **not at CERN**)
 - 3 2-days hackathons (**at CERN**)
- We should keep **everyone's requirements** in consideration

Releases for DIRAC and DiracX stacks

v8, v9.0, v9.1

DIRAC v9

- Regular releases continue
- Changelog: github.com/DIRACGrid/DIRAC/releases

DiracX

- Ongoing development releases
- Changelog: github.com/DIRACGrid/diracx/releases

Update process for v8 users

For v8 users still on the legacy stack:

- WRT one year ago, the only significant change is that **you should now target v9.0** (always target the latest version)
 - wiki:
- v8 and v9.0 are in maintenance mode; new features go to v9.1 and DiracX
- Contact the DiracGrid team (mostly me) if you need help with the transition

HSF Affiliated Project

DiracGrid is an HSF affiliated project.

This affiliation recognizes DiracGrid's contribution to the HEP software ecosystem and ensures alignment with community-wide best practices.

Publications and Outreach

CHEP papers

- CHEP 2026 papers on DiracX architecture and deployment
- Links and DOIs to be added

DiracX at other conferences?

- DiracX presentations at various HEP computing conferences
- Community outreach and engagement

How to provide us a security advisory

- Security is a priority for the DiracGrid project
- We use **GitHub Security Advisories** for private vulnerability reporting
- Report at: github.com/DIRACGrid/DIRAC/security or github.com/DIRACGrid/DiracX/security
 - We will respond **ASAP**
- Supported versions: **>= v8.0** (older versions are not patched)

2 Free-for-all notes for This Workshop

Questions collection

- If you want, note down the questions in <https://codimd.web.cern.ch/gJTUQq0cS4ugVgyQnd9AgA>
 - They will likely be answered in the "discussing and hacking" sessions

Summaries

- I will use <https://codimd.web.cern.ch/xsfPILVaRuiadX4hGUVmcw>
- Volunteers are encouraged to add to the notes and share their understanding
- This helps everyone who couldn't attend and serves as a record for the community

Both the links are also linked from the workshop materials.
